

## **PIRS – Improvements**

**Release 3.50**

# Bulk Change – Provide Append and Remove Operations

Add or remove values in multi value fields in a bulk operation:

The screenshot shows a web application interface for bulk changes. At the top, there's a navigation bar with 'Dashboard' and 'All Action Items'. Below it, a table lists action items with columns for Number, Subject, Status, Responsible, and Involved. Three items are selected and checked. A modal window titled 'PIRS - Bulk Change - Selected entries (3)' is open. It has a 'Field' dropdown set to 'Involved' and a 'Value' input field containing 'Jim Miller <user1.test@test.sobis.com>'. The 'Operation' section has three radio buttons: 'Append' (selected), 'Remove', and 'Overwrite'. An 'Add' button is below. At the bottom, there's a 'Pending Changes...' table with columns for Field, Value, and Operation, which is currently empty. 'Perform changes' and 'Cancel' buttons are at the very bottom.

Number	Subject	Status	Responsible	Involved
AI00011	AI - 3.42	Open		Kibo Fleming
AI00004	AI - 3.39	Open	PIRS Approver 1	Kibo Fleming
AI00002	AI - 3.32	Open		Kibo Fleming

Field: Involved  
Value: Jim Miller <user1.test@test.sobis.com>  
Operation:  Append  Remove  Overwrite

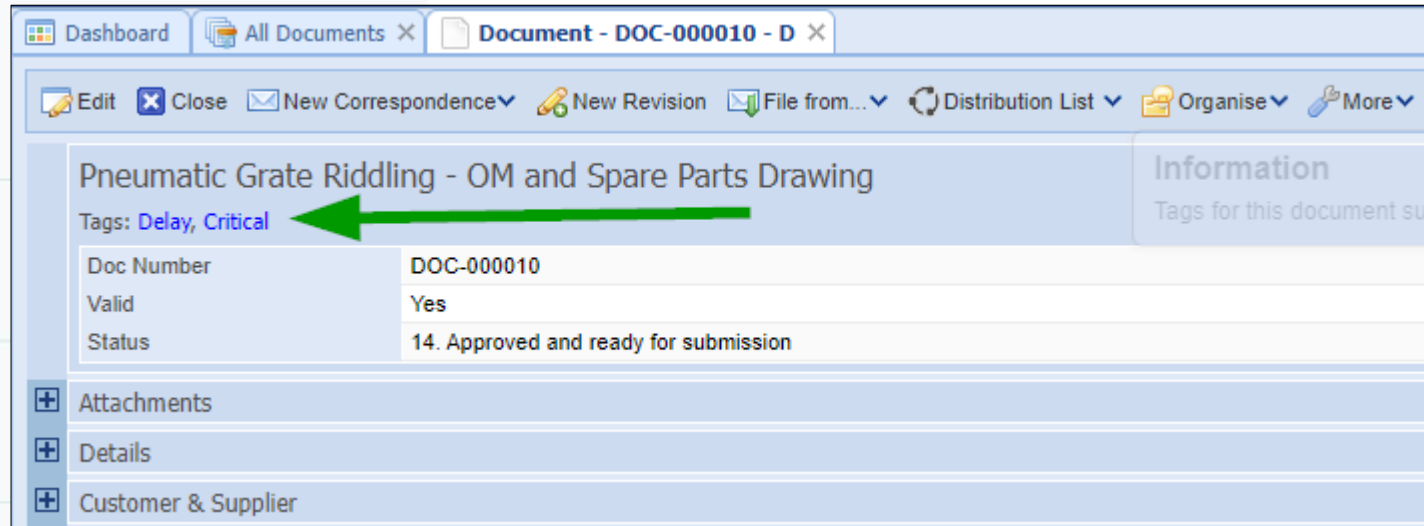

Field	Value	Operation
-------	-------	-----------

Often it is required to add or to remove values in multiple records in one go (i.e. LOT field in Documents). In the past that could be done only by a replacement of all values. In the future it is also possible to append or to remove single values, which simplifies data maintenance work. 😊

Please talk to SOBIS to enable this feature for defined multi value fields in your project(s).

# Transfer Tags to new Revision

Tags can be inherited to next document revision now:

Tag inheritance is not enabled by default.  
So please talk to SOBIS to enable this feature in your project.

# Add history entry in Contact when modification was done by sync job

Log history entries have been enhanced to show if a Contact was updated by automated sync job:
